As the "name" suggests, Microsoft KMS Micro is not written in Microsoft "C/C++" programming language (like Microsoft's .NET programming languages and Microsoft's Windows operating systems), but in a new Microsoft "C" programming language, which is called Microsoft.NET. There is some good news - Microsoft KMS Micro is not restricted to run on only Microsoft Windows operating systems. If you wish to run it on non-Microsoft Windows operating systems (like Linux or non-Windows operating systems such as Apple Mac OS X and Apple iOS), you can easily do so using either one of the two following alternative ways: Alternative 1: If you have a Linux operating system, you can download and install Microsoft Linux technology to run Microsoft KMS Micro on your Linux operating system. You can download Microsoft Linux technology here: Alternative 2: If you have a non-Microsoft Windows operating system, you can download and install the open source cross-platform Microsoft.NET Core framework to run Microsoft KMS Micro on your non-Microsoft Windows operating system. You can download the open source cross-platform Microsoft.NET Core framework here: I will demonstrate you how to use Microsoft.NET Core with your non-Microsoft Windows operating system in the following detailed article: Please be aware that this article will explain you how to use Microsoft KMS Micro on non-Microsoft Windows operating systems, like Linux and non-Windows operating systems, including Mac OS X and Apple iOS (iPhone/iPad). If you wish to use Microsoft KMS Micro on only Microsoft Windows operating systems, then I suggest you read my article: 82157476af
